Automated camera switching for flex spaces

Get advanced audio and video conferencing in flex spaces up to 35' x 55' (10.7 x 16.8 m). Thanks to Nureva's sound location data for automated camera switching and Sony's built-in AI analytics, remote participants will always see the speaker clearly. And with true full-room microphone pickup and continuous autocalibration, they'll hear everything clearly as well, no matter how the space is reconfigured.

Solution components

Nureva® HDL410 audio conferencing system

- Two microphone and speaker bars providing full-room pickup with 16,384 virtual mics
- Next-gen Microphone Mist™ technology producing sound location data for simplified automated camera switching
- Connect module with advanced processing power and pro AV features (no DSP required)
- Easy wall-mounted installation in under 60 minutes with no specialized skills or tools
- Includes Nureva Console, our device management platform that enables the setting of camera zones, monitoring of devices and more
- Available in black (HDL410-B) or white (HDL410-W)
- 2-year warranty (additional 3 years available)
